

# SALISWAB® ORAL HYGIENE SWABSTICK

## Saliswab alleviates Xerostomia\* (Dry Mouth)

*\*Xerostomia (dry mouth) is one of the most common side-effects of drug therapy and may be so serious as to prevent continued medication. It is prevalent in bedridden patients due to inactivity. It can be particularly troublesome in the elderly, as oral secretion is already impaired. The elderly often consume several drugs at the same time which may decrease salivary flow and add to the problems of dry mouth.*

- Provides oral lubrication for patients on oxygen, general anesthesia and drug therapy.
- May be used as a saliva substitute.
- Provides relief from the discomfort of dry mouth.
- Works on contact to moisten oral mucosa and stimulate saliva production.
- USP Glycerin is gentle and soothing.
- Individual foil packets prevent cross contamination.
- Swabs impregnated with a pleasant, sugar free black currant flavor.
- CE marked for all countries in Europe.
